EDUCATION

Old Dominion University

M.S. in Electrical & Computer Engineering

Norfolk, VA

Anticipated May 2027

Thesis: *AI Framework for Disease-Agnostic Brain Glucose Hypometabolism Prediction*

B.S. in Computer Science

May 2025

Tidewater Community College

A.S. in Computer Science

Norfolk, VA

May 2023

RESEARCH INTERESTS

Deep learning for medical image analysis, neuroimaging, multimodal learning, neurodegenerative disease modeling

RESEARCH EXPERIENCE

Graduate Research Assistant

Sept 2025-Present

Old Dominion University, advised by Dr. Khan Iftakharuddin

Vision Lab

- Trained a multimodal CNN-Transformer model from scratch to predict regional age-adjusted FDG-PET uptake, enabling hypometabolic profile prediction from s/fMRI scans and CSF proteomics.
- Designed CoMNeT: a 3D MedNeXt-CorrDiff brain tumor segmentation framework that improved average Dice score over SegResNet and MedNeXt baselines by 0.0243 and 0.0101 on the UTSW-Glioma dataset.
- Developed a standardized, BIDS-compliant preprocessing pipeline for multimodal neuroimaging (sMRI, fMRI, FDG-PET) using MATLAB, fMRIPrep, and Clinica, ensuring reproducible research outcomes.

Undergraduate Research Assistant

Sept 2024-Sept 2025

Old Dominion University, advised by Dr. Khan Iftakharuddin

Vision Lab

- Trained a random forest classifier for atypical Alzheimer's disease classification using cognitive test scores and MRI features, improving recall from 34% to 77% on ADNI and 52% to 69% on NACC over baseline.
- Constructed a FreeSurfer pipeline on an HPC cluster to extract regional volumetric MRI features at scale.
- Visualized an ROI-map on an anatomically averaged brain template to highlight brain regions with significant features ($\alpha = 0.05$) for Alzheimer's classification with volumetric group mean z-score color coding.

NSF REU Intern - Developing Self-Drive Algorithms for Electric Vehicles

May-July 2024

Lawrence Tech and Michigan State University, advised by Drs. Chan-Jin Chung and Josh Siegel

Computer Science & Artificial Intelligence Robotics Lab

- Designed an adaptive speed algorithm to reduce acceleration and braking in autonomous vehicles through intersections by up to 75.35%, minimizing fuel consumption and noise pollution.
- Implemented and analyzed DBSCAN and K-means machine learning self-drive algorithms for reliability.
- Built a simulation in GazelleSim for testing our autonomous intersection control in a controlled environment.

NSF REU Intern - Disinformation Detection and Analytics

June-Aug 2023

Old Dominion University, advised by Dr. Jian Wu

Lab for Applied Machine Learning and Natural Language Processing Systems

- Engineered prompts and tuned hyperparameters with the OpenAI API for scientific claim verification.
- Increased the size of our project corpus by over 200% to improve benchmarking the effectiveness of the GPT-3.5-turbo model's ability to generalize across multiple scientific news domains.
- Calculated the precision, recall, and F1 score on zero-shot classification with the GPT-3.5-turbo model against our dataset on two sub-tasks: stance labeling and identifying sentence rationales.

SELECTED PROJECTS

Resting State Functional MRI Based Alzheimer's Disease Classification

ECE 784: Computer Vision Term Project

- Trained an SVM with SelectKBest feature selection to classify Alzheimer's disease from resting-state fMRI data on an ADNI cohort of 66 patients, achieving up to 0.71 balanced accuracy.
- Performed rs-fMRI preprocessing and AAL2 brain parcellation to extract: functional connectivity, amplitude of low-frequency fluctuations (ALFF), regional homogeneity (ReHo), and mean BOLD signal features.

Pre-Processing and Noise Distribution Learning in MRI

ECE 783: Digital Image Processing Term Project

- Applied non-local means filtering to denoise MRI corrupted by additive Rician noise, achieving a 39.8% SNR increase and experimentally verifying that the Rician distribution approaches Gaussian at high SNR.
- Modeled MRI acquisition noise by generating Rician samples from a bivariate normal distribution, and performed residual distribution analysis between the clean reference image and denoised images.

SELECTED TECHNOLOGIES

Programming Languages

Python, R, Bash, C++, MATLAB

Libraries & Frameworks

Medical Imaging: fMRIPrep, Clinica, FreeSurfer, SPM, NiBabel, Nilearn

Machine Learning / General: PyTorch, OpenCV, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

AWARDS

NSF CISE REU Travel Grant – \$1,200
